

4.1.2 Windows systems

1. Release code – We made available releases on the download page (<http://biopython.org/wiki/Download>)

5.2.2 Using the Python package index

5.4 Installing from source on Windows

This section deals with installing the source (i. e. from git or from a source zip file) on a Windows machine.

```
python setup.py test
```

You can also run them by typing `python run_tests.py` in the Tests sub directory. See the main Tutorial for further details (there is a whole chapter on the test framework).
